

# One Piece of Software

Create nested, multi-tenant virtual data centers in mouse-clicks from liquified storage, RAM, CPU and network resources of commodity x86 servers.

## One Dashboard. One API. One Patch. Zero Integration.

-  Replace 10 licenses and vendors with 1
-  Easily scalable, just add servers
-  Increase agility, create virtual data centers in seconds
-  Predictable, controllable, transparent spend
-  Extend the life of your hardware
-  Standardize compliance with recipes
-  Reduce costs by up to 2/3rd
-  All the benefits of Simplifying IT

### Global Data Deduplication

- Inline, block-level deduplication built into the filesystem
- Data encrypted at rest and in transit
- Dramatically reduces hardware
- Snapshot 100s of TBs of data in seconds
- WAN optimized deduplicated replication
- Asynchronous data replication for DR and Business Continuity

### Data Center Encapsulation

- Storage, network, compute and RAM are abstracted into a single encapsulated Virtual Data Center (VDC)
- Public and Private Networking can be assigned and isolated to individual VDCs
- Each VDC is its own instance of the operating system and stands alone with no dependencies

### Nested Multi-Tenant

- Allocate CPU, storage, RAM, and network resources to sub-tenants in real time
- Custom sub-tenant branding, Great for white-label resellers
- Use sub-tenants to segment workloads for compliance, chargeback, and secure enclaves

### Automation Recipes

- Automate any function in Verge.io with recipes and APIs
- Use recipes to create sub-tenants and VM templates according to standardized compliance

## Take a FREE Test Drive

There's nothing like seeing it to believe it.

## Multi-Tenant Virtual Data Centers

Only Verge.io allows you to create sub-tenant virtual data centers.

Within the core VDC, the virtualized pooled resources can be provisioned to create self-contained, sub-tenant VDCs – each its own secure enclave.

*Use tenancy to segment infrastructure by compliance needs, or by customer, reseller, researcher or business unit.*

## Easy to Buy

Verge.io is licensed by the RAM and Storage used by your workloads.

Consumption – Pay monthly for the RAM and Storage consumed by your workloads. Ideal for growing or nonpersistent workloads.

Capacity – Pay annually up front for the RAM and Storage capacity your workloads can consume. Ideal for large and persistent workloads.

### General System Features

- Multi-tenant/cluster/site platform
- Create multiple virtual data centers
- Intuitive web-based dashboard
- Recipe based automation
- Monitoring, managing and alerting
- Statistics & accounting
- Rest-like API

### Storage

- Scale out vSAN
- No 3rd party software required
- Global inline deduplication
- Corruption detection & correction
- Dedupe-aware data replication
- Automated health scanning
- Multi-Tiered Storage Levels
- Live maintenance software updates
- 256 Bit Encryption

### Compute

- Built-in hypervisor (QEMU/KVM)
- Intel / AMD CPU support
- Linux and Windows Guest Support
- Live VM migration – zero downtime
- Web-based machine management
- Web-based VM Guest console
- GPU and vGPU pass through
- Bare metal-like performance
- Automated VM snapshot & retention

### Network

- Built-in web-based firewall
- IPsec and WireGuard VPN
- External/Internal network
- NAT/PAT rules engine
- Packet rate throttling
- Real-time and historical metrics
- BGP; OSPF; vLAN; vXLAN
- DHCP/DNS server
- IP address management
- Authoritative DNS

### Verge OS

- Automatic non-disruptive updates
- Secure OS Firmware
- Automated install supports PXE
- Linux based kernel
